BENCHMARK FOR
THE INDUSTRY

Sustainability put into practice

Our vision is the implementation of Best Available Techniques combined with our own in-house R&D innovations.

Sustainability is not a project for us, it is part of our company's DNA and can be found in all our daily business.

High quality and longevity are our set standards and lead to a lower environmental impact throughout the life-cycle of all our products.

Our current environmental projects

In-house depuration of sludge towards bio fertilizer

Reforestation on site with more than 150.000 trees

Rainwater harvesting

Own solar energy production that also supplies the local grid

Minimization of waste of any type and implementation of a strict recycling strategy

Constant R&D for chrome and metal free leathers as well as other sustainable practices

Our sustainable tanning methods

Chrome and metal free leathers considering all sustainability parameters of leather production. We reduce water consumption and TDS by 40%.

Pure veg tannage from Mediterranean olive trees providing high quality, biodegradable leather that is skin-friendly, free from heavy metals and save to work with.

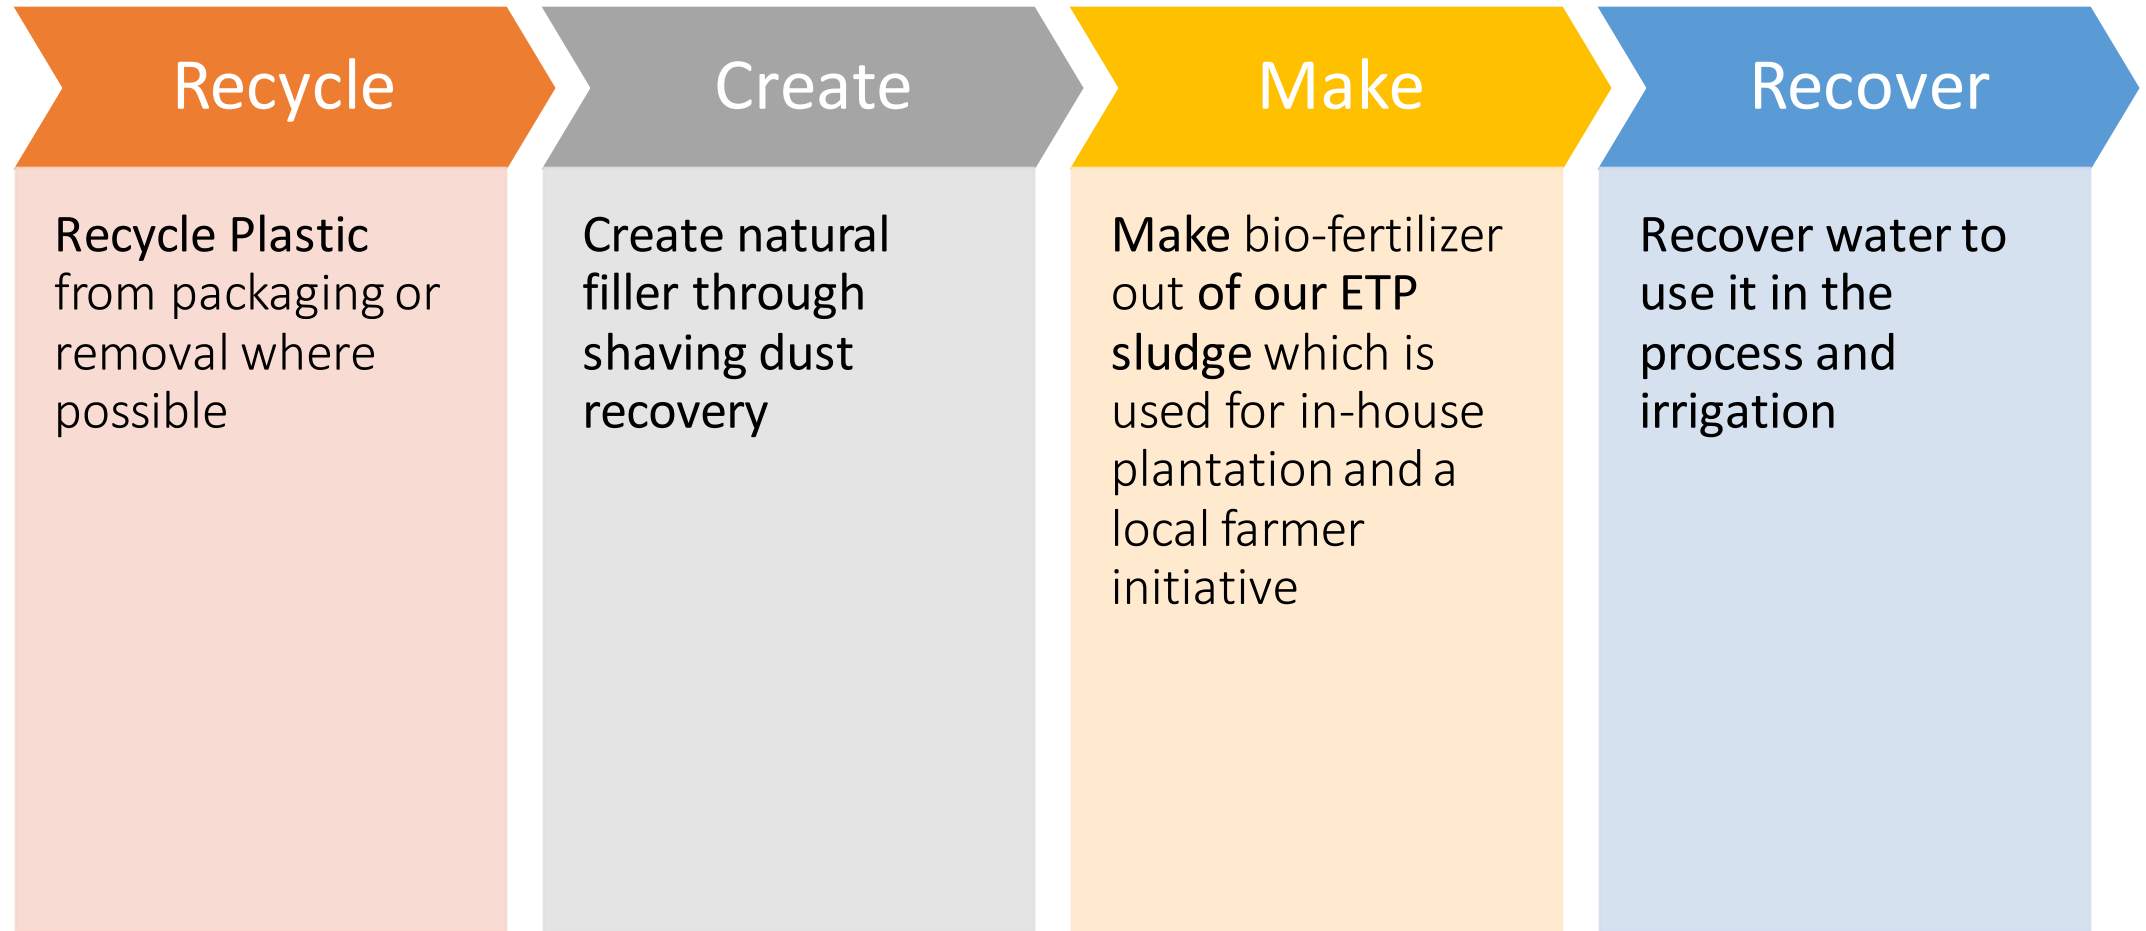

Synthetic tannage that stabilizes the collagen to ensure a long product life. Simultaneously the articles are kept natural to ensure biodegradability if required.

Lite leathers provide multiple advantages such as lower water and chemical intake, as well as an improved comfort through the reduced weight.

Recycling at Avanti means

Our current social projects

- Employees are either locals or get free housing on site
- Employment and training of local women who have no background of the industry
- Support of a school for children with special needs in Chennai
- Leading a shoe project in Africa to support local communities
- Support local farmers with bio fertilizer
- Social community functions and sponsoring
- Drinking water tanks for local community

Collaboration as key to success
